github.com/HaiGH-Space • haigh-space.github.io/me

Experienced in **Back-End and Front-End** development, focusing on building high-performance **Web** applications. Proficient in multiple programming languages and dedicated to collaborative problem-solving in fast-paced environments.

EDUCATION

Bachelor of Engineering in Information Technology	Sep 2021 - Dec 2025
Nong Lam University - Ho Chi Minh City	GPA: 3.0
• Technical Core: Built a strong foundation in OOP, Design Patterns, Data Structures, and Algorithms. • Applied Learning: Focused on Software Engineering principles, applying them to develop full-stack solutions and open-source contributions.	

WORK EXPERIENCE

Fullstack Developer	Aug 2025 - Jan 2026
TMA Solutions	Ho Chi Minh City
Agent4PM Project (Full-stack)	
• Engineered full-stack User Management and Role-Based Access Control (RBAC) systems using React (Shadcn UI) and MongoDB, securing platform data integrity and user permission hierarchies. • Implemented and integrated WebSockets to enable real-time data synchronization, enhancing platform interactivity and reducing latency for live updates. • Collaborated within an Agile/Scrum team to deliver high-quality features in a fast-paced environment, ensuring coding best practices and security standards, utilized Jira and Git to streamline version control and team collaboration. • Accelerated feature deployment by 15%, delivering high-priority modules one week ahead of schedule through proactive testing and iterative refinement.	
Teledeaf Project (Frontend)	
• Architected responsive, high-performance user interfaces using ReactJS and SASS, transforming complex design mockups into production-ready functional code. • Standardized code quality across the frontend repository by lead-participating in peer code reviews, reducing post-deployment bugs and technical debt. • Enhanced cross-device accessibility and UI consistency, ensuring a seamless user experience across mobile and desktop breakpoints. • Implement responsive UI components using HTML, SASS, and ReactJS to ensure seamless Web performance.	

PROJECTS

Sync Flow 	Feb 2026 - Present
• Full-Stack Developer (Solo Project): Independently designed and engineered a unified workspace that merges structured project management (Jira-style) with real-time team communication (Discord-style). • Contextual Collaboration: Developed a unique Web-based integration of 'Contextual Meetings' to collaborate on specific issues in realtime. • System Architecture: Architected a hierarchical domain (Workspace → Project → Issue) with a robust RBAC system to manage permissions across tasks, comments, and meeting rooms. • Backend & Security: Built a secure NestJS API featuring session-cookie authentication, email verification flows, and strict DTO-based validation via Zod and Prisma ORM. • High-Performance UI: Created a modern Kanban dashboard using Next.js and Tailwind CSS, featuring drag-and-drop interactions, optimistic UI updates, and multi-language support (EN/VI). • Real-time Flow: Implemented interactive comment threads and project-scoped issue numbering to ensure a smooth, professional-grade workflow for enterprise teams. • Scalability: Designed a PostgreSQL schema optimized via Prisma that maintains sub-500ms query response times even with deep hierarchical data (Workspace > Project > Issue).	

SKILLS

Languages: Java, Kotlin, TypeScript, JavaScript, Python
Frontend Development: HTML, CSS, ReactJS, Next.js, Shadcn UI, Zustand, SASS, i18n
Backend Development: Spring Boot, NestJS, Hono, Node.js
Data & Real-time: MySQL, MongoDB, WebSockets
Technical Foundations: Mastered basic to advanced concepts of OOP, Design Patterns, Data Structures, Algorithms
Agile Methodologies & Tools: Git, GitHub, Jira, Scrum
Soft Skills: Communication Skills, Collaborative Problem Solving, Software Development Best Practices
